

The National Hair Journal – Low-Level Laser Therapy...Another Laser Viewpoint

Low Level Laser Therapy was featured in the Technology section of the Winter 2005 issue of “The National Hair Journal”, a professional publication on hair replacement and restoration. The following is an excerpt from an interview with Dr. Charles Maricle, CEO, Sunetics International titled “Another Laser Viewpoint”:

“If you are already a bald individual, you’ve waited too long. Laser Hair Therapy is best suited for somebody who’s just started to experience hair thinning and hair loss. In situations where the hair follicles are becoming miniaturized, the laser has been proven to be very effective in creating stronger, healthier hair. It ‘revitalizes’ the existing hair.”
